

Skills

- HTML, CSS, Go, Java, Python, React, Spring Boot, Javascript, MongoDB, PostgreSQL, Azure, MySQL, Grafana, Kafka, Prometheus, Git, Kubernetes, Node.js, Generative AI, Microservices, REST API, JIRA, Splunk, Kibana, JUnit, Google Cloud / GCP, GitHub Actions

Experience

Software Engineer

Sep 2024 - Present

AT&T

Contract Microservices

- Worked on microservices spring boot for contract generation, and end-to-end contract lifecycle management, following RESTful and domain-driven design principles, and also actively followed Agile methodologies.
- Designed and built Template & Clause Management services with versioning and governance, improving template reusability by 40% and reducing legal inconsistencies across contracts.
- Built a Contract Generation Engine to dynamically assemble contracts by merging templates, clauses, and customer inputs while ensuring consistency and compliance.
- Integrated external enterprise systems including AT&T Salesforce (order intake), Pricing APIs, and eSign platforms using secure REST integrations and asynchronous workflows.
- Optimized data access using Spring Data JPA & Hibernate (query tuning, indexing, transaction management), improving contract retrieval performance by 30%.
- Developed and executed unit test cases using JUnit and Mockito to ensure code quality and improve test coverage for microservices.
- Utilized Splunk and Kibana for log monitoring, troubleshooting, root cause analysis, performance tuning, and triaging complex production issues independently.

Enterprise Infrastructure System

- Made enhancements in the EIS source code for the better sonar cube results and fixed few vulnerabilities in the EIS code. Worked on oracle sql by writing complex procedures and packages to meet the business requirements.
- Contributed to CI/CD pipeline automation using Maven, Git, Jenkins, and GitHub Actions for build, deployment, and release management.
- Assisted in troubleshooting complex production and performance issues through log analysis, debugging, and root cause identification.
- Gained foundational knowledge of Generative AI concepts, including LLMs, prompt engineering.

Associate Software Engineer

Aug 2022 - Jun 2024

Maersk Global Service Centres Pvt . Ltd.

Order Handling Platform

- Developed Self-Service Instant Booking feature, improving booking accuracy by 50% and operational efficiency.
- Engineered cargo-weight restrictions feature, utilizing API data for real-time capacity determination, enhancing booking accuracy, enhanced Java reactive programming, boosting application responsiveness and user experience.
- Implemented Restful APIs, increasing data exchange efficiency by 20% and enabling seamless third-party integrations and designed multiple micro services and supporting SDKs with spring framework ranging from order capture service.
- Integrated Temporal framework for orchestrating Order Capture workflows, rules engines, notifications, and event publishing.

Event Management Platform

- Implemented stand-alone self-service for tenants to browse real-time data in Kafka. And also did Self-service capabilities to perform CRUD operations, implemented as micro-services in Go.
- Identified requirements and provisioned Kafka core artifacts, ensuring seamless functionality of the event streaming platform. Integrated Grafana alerts via API, reducing alert response time by 75%, streamlining and enhancing the monitoring process.
- Led the development of an Event Insights solution, increasing tenant engagement by 50% with event views and key metrics.
- Utilized tools such as Swagger to document internal APIs comprehensively to improve developer productivity by 15%.
- Engaged in Agile methodologies, leveraging Jira and Confluence for project management.

Achievements

- Received Spot Award at A.P. Moller – Maersk for delivering timely enhancements.
- Certified in Python from Microsoft Technology Associate.
- Certified in JavaScript from Microsoft Technology Associate.

Education

Aditya engineering college

2022

BE/B.Tech/BS in Information Technology | 8.8 GPA
